PROFESSIONAL SUMMARY

AI Engineer with strong expertise in **LLM systems, validation pipelines, and scalable backend development**. Experienced in designing **RAG architectures, evaluating LLM outputs, and building AI-powered web applications**. Skilled in converting complex AI reasoning into structured, testable systems with high accuracy and reliability. Proven ability to develop **production-ready AI solutions**, including CRM dashboards, automation tools, and intelligent assistants.

PROFESSIONAL EXPERIENCE

IKIO LED LIGHTING | AI Engineer

July 2025 - Present

- Built **LLM validation pipelines** using Python, OCR, and OpenAI APIs to extract, verify, and score structured/unstructured documents. Designed **evaluation frameworks** to test LLM conversational outputs for correctness, consistency, and compliance
- Implemented **RAG-based systems** with validation layers ensuring factual accuracy and contextual grounding. Developed **modular, reusable Python components** for scalable AI systems handling edge cases and noisy inputs. Collaborated with cross-functional teams to define validation logic and improve model alignment.

Autus Cybertech Private Limited | AI Engineer

May 2024 – July 2025

- Developed **AI-powered dashboards and analytics systems** with strong validation logic. Built **test cases and edge-case evaluation frameworks** for AI outputs under variable conditions.
- Refactored legacy systems into an **optimized, scalable microservices-based architecture**. Conducted **code reviews and maintained technical documentation** for production systems.

CyberYaan Training & Consultancy | Machine Learning Trainer

December 2023 – April 2024

- Built and evaluated **GenAI prototypes** focusing on correctness and reasoning quality. Identified **failure cases, hallucinations, and reasoning gaps** in LLM outputs. Recognized as **an AI Evangelist** for building impactful LLM-based PoCs.

TECHNICAL SKILLS

- Primary:** Python, R, JavaScript, FastAPI, Flask, React, Node, PyCharm
- GenAI / LLMs:** OpenAI APIs, Prompt Engineering, RAG Pipelines, LLM Evaluation, Multi-Agent Reasoning, Output Validation
- Backend & Scalability:** REST APIs, Microservices, OOP, Design Patterns, Performance Optimization
- Databases:** MySQL, MongoDB, SQLite
- Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, CI/CD, Git
- ML Foundations:** NLP, Computer Vision, Model Evaluation, Feature Engineering
- Soft Skills:** Analytical Thinking, Technical Documentation, Cross-Team Collaboration

PROJECTS

ESCO Project Management System

- Developed a **full-stack AI-powered CRM and project management web application**. Built using **Flask, MySQL, and REST APIs** with role-based dashboards and workflow tracking. Implemented modules for **bid management, project tracking, document handling, and reporting**. Designed **analytics dashboards** for insights like max calls, duration, and location tracking
- Integrated backend systems with scalable database designs and filtering mechanisms. Deployed on **VPS with NGINX and domain routing**, ensuring production readiness

LLM-based Documentation Assistant

- Designed a **multi-agent LLM system** with reasoning validation and debate mechanisms. Implemented **structured verification layers** to ensure logical correctness and safe outputs. Focused on **evaluation-first AI design**, not just generation

Face Recognition and Anti-Spoofing

- Built deep learning models using **FaceNet and ArcFace**. Achieved **95%+ spoof detection accuracy** with strong evaluation and validation pipelines. Performed **failure-case analysis and model robustness testing**

EDUCATION

Bachelor of Technology—Computer Science (AI)

Percentage: 92%

CERTIFICATIONS

- Certified **ServiceNow Application Developer** certification and Scripting Fundamentals micro-certification.
- AI/ML & Statistics Certifications — [Samatrix.io](https://samatrix.io) . GitHub / LeetCode (Problem-solving & algorithmic practice)
